

C4Media Frontend Developer Assignment

Please create a simple two page (homepage + career) website.

Deadline

Friday, January 18, 2019

Lo-fi wireframe

- <https://drive.google.com/file/d/1Sr7bqhdSFr2nLMz6Ja-3kYt-sdInSrP9/view?usp=sharing>

1. Requirements

Hosting and Code Architecture

- Create a private GitHub repository and host the codebase there.
- Use a reactive framework of your choosing (Angular, Vue, React) and develop the project as a SPA (single page app).

Design and Layout

- Keep it simple. ;)
- You can use design elements from <https://infoq.com>:
 - **Heading font:** <https://fonts.google.com/specimen/Fira+Sans>
 - **Body font:** system fonts stack
 - **Logos:** [InfoQ](#), [QCon](#), [C4Media](#)
 - **Stock Images:** <https://unsplash.com>
 - **Iconography:** up to you
- Mobile-first / responsive.
- Homepage should adapt to viewport size (width and height) so there's no scrolling on desktop.
- Supports displays with wider resolutions (main page container should expand up to around 1650px).

2. Content

- Content for the career page is available at: <http://c4media.com/career.html>
- For the iFrame, feel free to use dummy content.

3. Notes

- Some elements are intentionally missing (e.g. a way of navigating back from the careers page). Please provide your solution for this.

4. Upon Completion

- Once you are satisfied with your results, please email the github repo link to john@c4media.com and cc teresa@c4media.com
